# N ROAD INVENTORY YEAR-END REPORT

The background of the cover is a solid blue color. Overlaid on this background is a faint, light blue line-art graphic. This graphic includes a large compass rose in the center, with the letters 'NW' and 'NE' positioned near its top-left and top-right quadrants, respectively. Below the compass rose, there is a stylized representation of a city skyline, featuring several buildings of varying heights. At the bottom of the graphic, there are curved lines that suggest a road or a coastline.

## INTRODUCTION

This report contains selected 2017 year-end statistics from the Massachusetts Road Inventory file and supersedes the 2016 report issued last year. The Road Inventory file, maintained by the Office of Transportation Planning, contains information on mileage, identification, characteristics, and condition for all roadways in the state. It is a widely used transportation planning resource within the Massachusetts Department of Transportation [MassDOT] and is the foundation of several important programs. Among its more important uses include:

- Identifying functional classification, jurisdiction, and National Highway System status of all roadways in the state.
- Fulfilling Highway Performance Monitoring System (HPMS) reporting requirements to the Federal Highway Administration.
- Determining centerline miles of city/town accepted roads used for allocating State Aid to communities.

The Road Inventory file also serves as the foundation of Massachusetts Geographic Information System (GIS) capabilities. It is linked to 1:5,000 Centerlines using ArcGIS and contains nearly 500,000 road inventory records representing over 36,000 centerline miles of roadway. This GIS platform allows for easy mapping of any of the 80 attributes in the Road Inventory file at any geographic level (i.e., State, MassDOT Highway District, Metropolitan Planning Organization (MPO), Town, etc.).

This 2017 year-end report contains centerline and lane mileage data on jurisdiction, functional classification, and federal-aid status at the town, MPO, MassDOT Highway District, and state levels. Please note that not all mileage for ramps are included in any of these tables and that lane miles do not include any shoulders. An appendix containing documentation of the Road Inventory database accompanies these reports.

We hope that you find this report useful. If you should require any additional information about the content of this document or want to learn more about the Road Inventory program, please contact the GIS Services group at 857-DOT-4GIS (857-368-4447).

**NOTE: Due to the towns of Duxbury, Hanover, Pembroke and Stoughton moving from the Boston MPO to the Old Colony MPO, you will see a significant mileage change in these 2 regions.**

# I. DEFINITION OF TERMS AND CATEGORIES

## ROAD INVENTORY YEAR-END REPORT 2017

### DEFINITION OF TERMS AND CATEGORIES

1. **Centerline Miles** refer to the linear length of a road segment. For divided highways, only the length of one side of the roadway is counted.

2. **Lane Miles** refer to the linear length of lanes of a road segment. The number of lanes on both sides of the roadway are counted in the mileage calculation. Shoulders and auxiliary lanes are not included in the calculation of lane miles.

3. **Jurisdiction** refers to the agency or entity that owns and has administrative authority over the roadway. The Road Inventory file contains 18 different jurisdiction categories. For the purposes of this report, they have been consolidated into ten groups. Please note that unaccepted roads consist of roads open to public travel but not formally accepted by a city or town, as well as some private ways.

4. **Functional Classification** refers to the character of services that a particular roadway is intended to provide. In general, roads either serve to provide mobility for vehicles or access to locations. The process of functional classification was mandated by Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA) and implemented in 1993 by the Office of Transportation Planning in cooperation with the 13 Regional Planning Agencies. Roadways are divided into the following three classification categories:

*Arterials:* These roadways provide the highest level of mobility at the greatest vehicular speed for the longest uninterrupted distances and are not intended to provide access to specific locations. Arterials are further subdivided into Principal Arterials and Minor Arterials. However, for the purposes of this report they have been grouped together. Please note that Interstates are considered Arterials, but they have been given their own category in this report.

*Collectors:* These roadways provide some level of both mobility and access. They collect traffic from Local roads and funnel it to Arterials. In rural areas, collectors are further subdivided into Major Collectors and Minor Collectors, but for the purposes of this report they have been grouped together.

*Locals:* These roadways provide access to abutting land with little or no emphasis on mobility. The term Local road should not be confused with local jurisdiction. Most, but not all, functionally classified Local roads are under city/town jurisdiction.

5. **Aid Category** refers to funding categories that have been established by ISTEA and TEA-21. The Road Inventory directly identifies which roadways fall under the National Highway System Federal Funding category and indirectly identifies which roadways fall under the Surface Transportation Program Federal category and Non-Federal Aid category. These three funding categories are described below:

National Highway System (NHS) funded roadway network represents all Interstate roadways and principal arterials spanning the state in accordance with the Moving Ahead for Progress in the 21<sup>st</sup> Century Act (MAP-21). In addition, roadways connecting the NHS roadways with military bases (known as the Strategic Highway Network) are also considered part of the NHS network. NHS passenger and freight terminals are connected by roadways called NHS connectors.

Surface Transportation Program (STP) funded roadway network is comprised of any functionally classified roadway. STP funded roadways include all urban arterials, urban collectors, and rural arterials. According to the TEA-21 legislation, rural collectors are STP-eligible, but have a limitation on the STP funding amount.

State and Local Aid includes chapter 90 and other non-Federal Aid categories. Roadways that fall under this category are comprised of roads functionally classified as local roads.

DESCRIPTION OF ROAD INVENTORY FILE

**Route\_ID:** The primary state numbered route or designated non-numbered route on which this segment lies; when more than one route traverse a segment, the *highest order* (Interstate > US Highway > State Route), *lowest number* route is primary; non-numbered routes are used internally by Planning for pavement data collections. Route\_ID is also the unique identifier for the LRS record.

**From\_Measure:** The measured length along the specified *Routes* feature where the *RoadInventory* segment starts

**To\_Measure:** The measured length along the *Routes* feature where the *RoadInventory* segment ends

**From\_Date:** The date the *Routes* or event section became active, or, if not known, the date it was entered into the system; all roads active when this field was implemented were assigned a date 1/1/2004
